

Patient Rights & Responsibilities

We believe that patients who understand and participate in their treatment achieve better results. Please take a moment and familiarize yourself with your rights and responsibilities as a patient.

You have the right to:

- Know the risks, benefits and alternatives to proposed treatments or procedures
- Choose the physicians or other clinicians who will be providing care or treatment, as well as have information about them
- Receive information in easy to understand terms that will allow for an informed consent
- Privacy regarding medical care
- Participate in the plan of care, including your treatment plan, notifying your family or physician of admission and discharge planning
- Pain management
- Refuse care, treatment, and services in accordance with law and regulation
- Be informed about the outcomes of care, treatment, and services
- Receive information and communication in an understandable manner including provision of interpreter and translation services
- Formulate advanced directives and have staff and practitioners comply with those directives
- Reasonable responses to reasonable requests of service
- Leave the medical center against the advice of the physician
- Examine and receive an explanation of the bill for services regardless of the source of payment
- Select providers of goods and services after discharge
- Receive a Notice of Privacy Practices
- Request privacy protection
- Access protected health information in a reasonable time frame
- Amend protected health information
- Request an accounting of disclosures of protected health information
- Be free from any forms of restraint or seclusion as a means of convenience, discipline, coercion, or retaliation
- The least restrictive restraint or seclusion should be used only when necessary to ensure patient safety

- Receive care in a safe and dignified environment, free from all forms of abuse, neglect, harassment and/or exploitation

You have the responsibility to:

- Provide accurate and complete information concerning your present medical condition, past illnesses or hospitalization and any other matters concerning your health
- Tell your caregivers if you do not completely understand your plan of care
- Follow the caregivers' instructions
- Follow all medical center policies and procedures while being considerate of the rights of other patients, medical center employees and medical center properties

You also have the right to:

Lodge a concern with the state, whether you have used the hospital's grievance process or not. If you have concerns regarding the quality of your care, coverage decisions or want to appeal a premature discharge, contact the State Quality Improvement Organization (QIO). Contact information for the state and our QIO is located on the insert at the back of this booklet.

Regarding problem resolution, you have the right to:

Express your concerns about patient care and safety to hospital personnel and/or management (see inserted sheet at the back of this booklet). If your concerns and questions can not be resolved at this level, contact The Joint Commission at 1 (800) 994-6610, by Fax at (630) 792-5636, by e-mail at complaint@jointcommission.org, or by mail at:

Office of Quality Monitoring

Oakbrook Terrace, IL 60181

Designated Contact Person

Name _____

Relationship _____

Home Phone _____ Work Phone _____

The Health Insurance Portability and Accountability Act is the law that requires any medical facility to make sure that medical information about you is kept private. We understand that medical information about you and your healthcare is personal and we are committed to protecting your personal medical information. HIPAA limits what patient information may be released in response to a verbal request (including telephone). We ask that you give careful consideration to designating a contact person.

I understand the above named person is the contact person. The contact person will receive all calls for information and may call in to the nursing unit for updates by providing the designated I.D. Code Number. I understand that I have the right to limit the type of information released.

Patient Signature

Your Right To Decide

Under federal and state law, you have the right to choose the medical treatment that you will receive. Normally, your decision about accepting or rejecting different medical treatments is expressed directly from you to your physician. However, you may not always be able to express your preferences. For example, if you were unconscious, you would not be able to directly communicate your medical treatment preferences to your physician. In order to protect your individual preferences and rights, states have enacted laws which allow you to express your wishes about future medical care in writing. These written preferences, called “advance directives,” are designed to enhance your control over medical treatment in the event that you are ever unable to speak for yourself.

This facility is committed to respecting your medical treatment preferences, whether such preferences are communicated directly or by means of an advance directive. It is the policy of the facility to comply with your wishes to the extent permissible under applicable law.

The following information explains advance directives generally. To obtain the legal forms for our state, or if you have additional questions, you should talk to your doctor, nurse, or social worker. If after reading this information, you have complaints concerning the advance directives requirements in this state, you may contact the Medicare State survey and certification agency for your region. Contact information for the state agency is available to you upon request.

Q: What are advance directives?

A: As described above, advance directives are written expressions of your medical treatment preferences which come into effect when you are incapacitated. The forms of advance directives vary from state to state.

Q: Do I have to have an advance directive?

A: No. You are not required to have an advance directive. Your decision not to have an advance directive will not prevent a physician or hospital from caring for you. In fact, physicians and hospitals are prohibited from conditioning the provision of care or discriminating against you based on your advance directive decisions.

Q: Are there preferred forms or types of advance directives? What if I decide I don't want it anymore?

A: You may choose any advance directive that is recognized by our state. Again, if you would like the particular forms for our state, or if you have additional questions, you should talk to your doctor, nurse, or social worker/case manager. Generally, advance directives may be revoked by you at any time. The method and manner of the revocation will vary based upon the form. If you have any questions, you should talk to your doctor, nurse, or social worker/case manager.

Speak Up

Help Prevent Errors In Your Care

Everyone has a role in making healthcare safe – physicians, healthcare executives, nurses and technicians. Healthcare organizations across the country are working to make healthcare safety a priority. You, as the patient, can also play a vital role in making your care safe by becoming an active, involved and informed member of your healthcare team. An Institute of Medicine (IOM) report has identified the occurrence of medical errors as a serious problem in the healthcare system. The IOM recommends, among other things, that a concerted effort be made to improve the public’s awareness of the problem.

The “Speak Up” program, sponsored by The Joint Commission, urges patients to get involved in their care. Such efforts to increase consumer awareness and involvement are supported by the Centers for Medicare and Medicaid Services. This initiative provides simple advice on how you, as the patient, can make your care a positive experience. After all, research shows that patients who take part in decisions about their healthcare are more likely to have better outcomes.

Speak up if you have questions or concerns, and if you don’t understand, ask again. It’s your body, and you have a right to know.

- Your health is too important to worry about being embarrassed if you don’t understand something that your doctor, nurse or other healthcare professional tells you.
- Don’t be afraid to ask about safety. If you’re having surgery, for example, ask the doctor to mark the area that is to be operated upon, so that there’s no confusion in the operating room.
- Don’t be afraid to tell the nurse or the doctor if you think you are about to receive the wrong medication.

- Don’t hesitate to tell the healthcare professional if you think he or she has confused you with another patient.

Pay attention to the care you are receiving. Make sure you are getting the right treatments and medications by the right health care professionals. Do not assume anything.

- Tell a nurse or doctor if something doesn’t seem quite right.

Speak Up! Help Prevent Errors In Your Care

- Expect healthcare workers to introduce themselves when they enter your room and look for their identification badges. A new mother, for example, should know the person to whom she is handing her baby. If you are unsure, ask.
- Germs are everywhere and sick people can get infections easier. You should expect that everyone who cares for you should have clean hands. If you do not see your nurse, doctor or other caregiver wash their hands or use a waterless alcohol hand cleaner when entering your room, it's ok to ask them if they have cleaned their hands.
- Know what time of day you normally receive a medication. If it doesn't happen, bring this to the attention of your nurse or doctor.
- Make sure your nurse or doctor confirms your identity, that is, checks your wristband or asks your name, before he or she administers any medication or treatment.
- Gather information about your condition. Good sources include your doctor, your library, respected website and support groups.
- Write down important facts your doctor tells you, so that you can look for additional information later. And ask your doctor if he or she has any written information you can keep.
- Thoroughly read all medical forms and make sure you understand them before you sign anything. If you don't understand, ask your doctor or nurse explain them.
- Make sure you are familiar with the operation of any equipment that is being used in your care. If you will be using oxygen at home, do not smoke or allow anyone to smoke near you while oxygen is in use.

Ask a trusted family member or friend to be your advocate.

Educate yourself about your diagnosis, the medical tests you are undergoing, and your treatment plan.

- Ask your doctor about the specialized training and experience that qualifies him or her to treat your illness (and be sure to ask the same questions of those physicians to whom he or she refers you).
- Your advocate can ask questions that you may not think of while you are under stress.
- Ask this person to stay with you, even overnight, when you are hospitalized. You will be able to rest more comfortably and your advocate can help to make sure you get the right medications and treatments.
- Your advocate can also help remember answers to questions you have asked, and speak up for you if you cannot.

Speak Up! Help Prevent Errors In Your Care

- Review consents for treatment with your advocate before you sign them and make sure you both understand exactly what you are agreeing to.
- Make sure your advocate understands the type of care you will need when you get home. Your advocate should know what to look for if your condition is getting worse and whom to call for help.
- If you are taking multiple medications, ask your doctor or pharmacist if it is safe to take those medications together. This holds true for vitamins, herbal supplements and over-the-counter drugs, too.
- Make sure you can read the handwriting on any prescriptions written by your doctor. If you can't read it, the pharmacist may not be able to either.

Know what medications you take and why you take them. Medication errors are the most common health care mistakes.

- Ask about the purpose of the medication and ask for written information about it, including its brand and generic names. Also inquire about the side effects of the medication.
 - If you do not recognize a medication, verify that it is for you. Ask about oral medications before swallowing, and read the contents of bags of intravenous (IV) fluids. If you're not well enough to do this, ask your advocate to do this.
 - If you are given an IV, ask the nurse how long it should take for the liquid to "run out."
 - Whenever you are going to receive a new medication, tell your doctors and nurses about allergies you have, or negative reactions you have had to medications in the past.
- Use a hospital, clinic, surgery center, or other type of health care organization that has undergone a rigorous on-site evaluation against established standards, such as that provided by The Joint Commission.
- Ask about the healthcare organization's experience in treating your type of illness. How frequently do they perform the procedure you need and what specialized care do they provide in helping patients get well?
 - If you have more than one hospital or other facility to choose from, ask your doctor which one offers the best care for your condition.
 - Before you leave the hospital or other facility, ask about follow-up care and make sure that you understand all of the instructions.
 - Go to Quality Check at www.jointcommission.org to find out whether your hospital or other health care organization is accredited.

Speak Up! Help Prevent Errors In Your Care

Participate in all decisions about your treatment. You are the center of the health care team.

- You and your doctor should agree on exactly what will be done during each step of your care.
- Know who will be taking care of you, how long the treatment will last, and how you should feel.
- Understand that more tests or medications may not always be better. Ask your doctor what a new test or medication is likely to achieve.
- Keep copies of your medical records from previous hospitalization and share them with your health care team. This will give them a more complete picture of your health history.
- Don't be afraid to seek a second opinion. If you are unsure about the nature of your illness and the best treatment, consult with one or two additional specialists. The more information you have about the options available to you, the more confident you will be in the decisions made.
- Ask to speak with others who have undergone the procedure you are considering. These individuals can help you prepare for the days and weeks ahead. They also can tell you what to expect and what worked best for them as they recovered.

MEDICINE

Safety Tips & Information Log

Here are some basic steps you can do to help prevent a medication mistake from happening to you or your loved ones.

At the hospital and clinic

- Share with your doctor a list of your current medicines, vitamins, herbs and supplements. A medications card is attached to this brochure.
- Make sure the doctor or nurse checks your wristband and asks your name before giving you medicine.
- Ask your doctor or nurse how a new medicine will help. Ask for written information about it, including its brand and generic names.
- Ask your doctor or nurse about the possible side effects of your medicines.
- Don't be afraid to tell the nurse or the doctor if you think you are about to get the wrong medicine.
- Know what time you normally get a medicine. If you don't get it then, tell your nurse or doctor.
- Tell your nurse or doctor if you don't feel well after receiving a medicine. If you think you are having a reaction or experiencing side effects, ask for help immediately.
- If you're not feeling well enough to ask questions about your medicines, ask a relative or a friend to ask questions for you and to help make sure you get and take the right medicines.
- If you receive intravenous (IV) fluids, read the contents of the bags of IV fluids. If you're not well enough to do this, ask a relative or friend to do it.
- If you are given an IV, ask the nurse how long it should take for the liquid to run out.
- Ask for a copy of your medication administration record. This lists all of the drugs you should be taking. Check it for accuracy. If you're not well enough to do this, ask a friend or relative to help.
- Before you leave the hospital or clinic, make sure that you understand all of the instructions for the medicines you will need to keep taking, and ask any questions you may have about any of your medicines.

ABOUT PAIN

A Guide To Understanding Pain Management

We want your hospital stay to be as comfortable as possible. Please tell your nurse as soon as possible if you are having any pain. If you are not able to talk and cannot tell us how bad your pain is, we have a picture scale you can use to let us know how much pain you are having. If you cannot use the picture scale, your nurses have been trained to observe and assess patients for pain and for response to pain medications. People used to think that severe pain was something they “just had to put up with,” but with current treatments that is no longer true. Pain can be controlled so you feel more comfortable. Here you can work with your nurses and doctors to prevent or relieve pain. When skin and internal tissue are irritated, damaged, or cut, nearby nerves send signals up the spinal cord to the brain. Fear and anxiety increase the signal, making pain seem worse. Ask questions so you know what to expect. This will help you be less afraid and more in control which will make pain easier to handle. You are the key to getting the best pain relief because pain is personal. The amount or type of pain you feel may not be the same as others feel, even those who have had the same procedure, surgery, or medical condition. Current pain control measures can make your recovery more comfortable. You can take an active role by asking what to expect, talking with your doctor, and accepting available pain medications. Do not worry about getting “hooked” on pain medicine. Studies have shown that the short-term use of pain medication is not addictive unless you already have a problem with drug abuse.

PAIN CONTROL CAN HELP YOU:

- Enjoy greater comfort while you heal.
- Get well faster. With less pain, you can start walking, do your breathing exercises, and get your strength back more quickly. You can even leave the hospital sooner.
- Improve your results. People whose pain is well controlled seem to do better. They may avoid some problems (such as pneumonia and blood clots) that affect others.

COMMUNICATING PAIN RELIEF

You will be asked to rate your pain on a number scale from 0 to 10. Zero stands for no pain up the scale to 10, which represents the worst possible pain imaginable. Be honest when rating your pain. If the pain medication is not helping, let the nurse and doctor know. Ask your nurse to give your medication before the pain gets worse or is at a pain level above “4.” If your pain gets ahead of the medication, you may not have the best level of relief.

PAIN ASSESSMENT: Below is the pain scale being used at our hospital.

*What you feel is real and unique to you.
Indicate your pain on a scale from 0 to 10.*

THINGS TO REMEMBER

You can get better pain control by doing the following

- Ask the doctors and nurses what to expect. Will there be much pain? Where will it occur? How many days is it likely to last?
- Discuss your past pain control experiences with your doctors and nurses that have either worked well or not so well for you.
- Discuss with your doctors and nurses any concerns you may have about pain medicine, including any allergies to medicines or prior substance abuse, and ask about side effects that may occur with treatments.
- Learn deep breathing and relaxation exercises.
- Use massage or hot or cold packs to help decrease the pain experience if ordered by your doctor. If you want to listen to music, bring your preferred listening device.
- Take the pain medicine that is ordered.
- Take pain medicine when pain first begins. The pain is better controlled if you do not wait to take pain medicine when it is worse.
- Take pain medicine before you do activity that you find makes the pain worse.
- Rate your pain using the pain scale 0-10. Be honest: If the pain medication is not helping, let the doctors and nurses know. The dosage may need to be adjusted.
- Set a pain control rating scale such as having no pain that is worse than 3 or 4 on the pain scale.
- Stick with your pain control plan if it is working. Your doctors and nurses can change the treatment if your pain is not under control.
- You need to let the doctors and nurses know about your pain. The doctors and nurses want and need to know about your pain to help control it.
